

# Instructions to execute the code:

## Requirements:

- 1) Python version after 2.7
- 2) PostgreSQL version after 11

## Steps to execute the code:

- 1) The code is stored in the python file *Data\_Freaks\_Phase\_2.py*
- 2) To run the code we need to provide access and authentication keys so as to establish a connection with the Twitter server to get live tweets.
- 3) These live tweets are used as the input data sets along with a CSV file containing similar type of Twitter data.
- 4) We just need to run the python file, but before that the connections to both PostgreSQL server and Twitter are necessary.

P.S. both require authentication

## Install PostgreSQL instructions:
